

**In the Specification:**

Please replace the paragraph beginning on page 2, lines 3-12 with the following paragraph:

In assembly, a tube 22 having the tension band 14 and lugs 16 applied, is placed over an opening in a bezel ~~11~~10 face down and the mounting lugs openings are aligned with bolts or studs 20 in the bezel 10. Such an alignment technique requires manual intervention to align the lugs 16 with the openings in the bezel 10. Set designers have expressed a desire for a mounting technique that would decrease the dimension of the mounting system, so that a trimmer visual appearance could be achieved. Set designers have also expressed a desire for a simpler more automated mounting technique that would allow the tube to be easily aligned within the set opening or bezel. The present invention provides mounting means, which permits a reduction in the size of the cabinet as well as a simple self-alignment apparatus for mounting the cathode-ray tube into the cabinet.
